

Designing a new garden for beginners

Have you decided to try your hand at gardening? Gardening is a fun and rewarding hobby for New England residents. But where do you start? If you're a beginner, the prospect of designing a garden can be daunting. You may be wondering how to start a flower garden or how to draw a garden plan. That's why our Bedford Garden Center has put together this handy guide for designing a garden for beginners. Just follow these simple steps and you'll have a beautiful garden in no time.

Create a Plan

The first step in designing a garden is to create a plan. This doesn't have to be a complicated process. Simply grab a pen and paper and sketch out a rough idea of what you envision for your garden. Consider the size and shape of your yard, as well as the amount of sunlight it receives. Then, decide what type of garden you'd like to create. Do you want a flower garden, a vegetable garden, or a mix of both? Once you have a general idea of what you want, it's time to start planning your garden layout.

Choose Your Plants

Now that you have a plan for your garden, it's time to choose your plants. When selecting plants, it's important to consider the climate in New England. Some plants may not thrive in our cooler temperatures and shorter growing seasons. Our gardening experts at New England Nurseries can help you choose the best plants for your garden.

Prepare Your Soil

After you've selected your plants, it's time to prepare your soil. This is an important step in ensuring that your plants will have the nutrients they need to grow. The type of soil you have will determine how you need to prepare it. For example, if you have sandy soil, you'll need to add organic matter to help retain moisture. If you have clay soil, you'll need to add sand to improve drainage. Once you've prepared your soil, you're ready to plant!

Plant Your Garden

Now that your soil is ready, it's time to start planting. Be sure to plant your taller plants in the back and shorter plants in the front. This will ensure that all of your plants are visible. Be sure that you are planting your selections in the right time of year. Some plants need to be started indoors and then transplanted outdoors. Others can be planted directly in the ground. Our experts at New England Nurseries can help you determine the best time to plant your garden.

Water and Fertilize Your Plants

Once your plants are in the ground, they will need regular watering and fertilizing. How often you need to water and fertilize will depend on the type of plants you're growing. Be sure to check the labels on your plants or ask our experts for guidance. With regular watering and fertilizing, your garden will soon be in full bloom.

New England Nurseries has been serving MetroWest & Bedford, MA since 1880. This established and experienced nursery not only provides a wide range of indoor house plants and supplies but also all the knowledge to go with them.
